SERIE XCA-xxx - one or dual-axis inclinometer

The XCA series is a new generation of digital small-volume MEMS tilt sensor from DPF. It has a two-channel Earth Gravity Inclination Unit that converts into a tilt angle by measuring static gravitational acceleration.

Thereby the tilt and pitch angle of the sensor output relative to the horizontal plane can be measured. Output mode analog, CAN, RS232, RS485 or TTL level interface standard is optional. It is an ideal choice for industrial automation control and platform measurement attitude. It has strong resistance to external electromagnetic interference and can adapt to long-term work in industrial harsh environment and solar power plants.

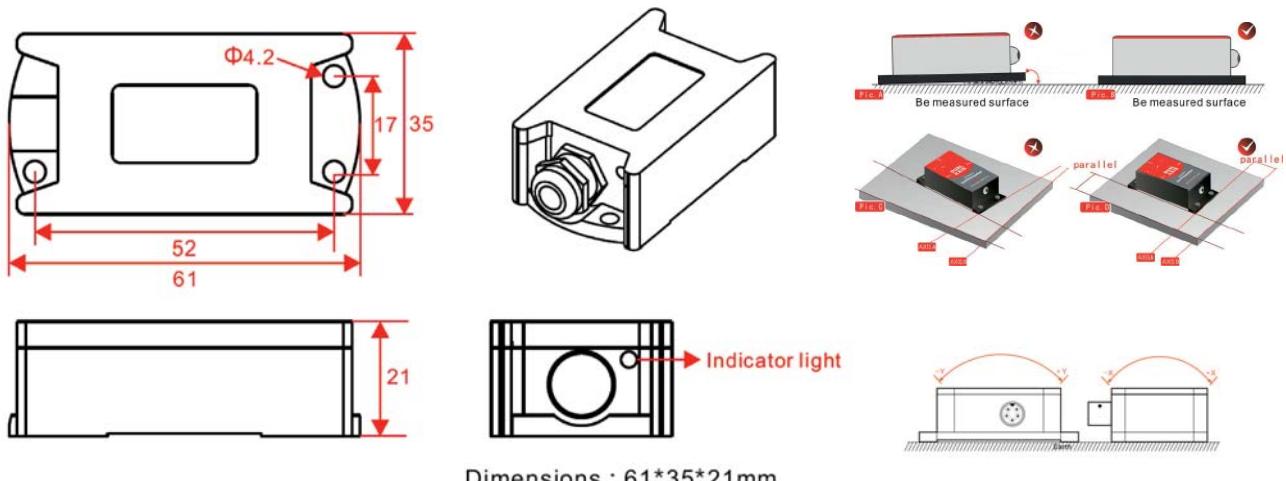

This product is primarily suitable for dynamic measurements of static and slow changes, not for fast-changing dynamic measurements.
